

Press Release

November,10 2016

With the growing success of Imeon Energy in Africa and Asia / Pacific region, the Company accelerates its global process of proximity strategy by opening 2 new local « Service Center ».

The growing success of Imeon Energy's hybrid inverters, combined with an ever increasing network of resellers across continents, has led the company to implement a strategy of proximity with its customers by opening local Service Centers to offer them the best service.

After the French Center, covering Europe, it's in South Africa, Port Elizabeth, where Imeon Energy opens this month a new Service Center.

IMEON's inverters rapidly took position in this country and neighboring countries (Zimbabwe, Mozambique, Namibia...) as the indispensable element for all solar PV installations.

IMEON inverters are a fusion of technology and innovation that perfectly meets the requirements of this growing market. The IMEON solutions enable the simultaneous use of several energy sources (photovoltaic / batteries / grid) to mitigate intermittency and fluctuation energy, ensuring a constant supply of power to equipped sites at a competitive price compare to the grid.

Pursuing its strategy, the local presence in South Africa will be followed by the opening of another service center in APAC in the first half of 2017, to stand closer to the markets of this area such as Australia, Malaysia or Indonesia.

« Our aim is to always offer the best service to our customers. The opening of this Service Center in Port Elizabeth is the answer to this need and is also an important step for us. Proximity is the key to our success in this territory and this Service Center is the demonstration of our will. Our local implementation plan will be very soon amplified on the APAC area, giving the proof that the company sets up seriously and sustainably to support its growth in an expanding market » says Christophe Goasguen, CEO of Imeon Energy.

About imeon Energy

IMEON ENERGY, is a French manufacturer of solar inverters. The developed solution increases the overall efficiency of photovoltaic systems through the use of smart storage management systems. The technology developed by Imeon Energy is the result of several years of R&D and is protected by international patent. The Company markets its solution within 70 different countries through leading resellers.
